Level Crossing

November 2015

4 weeks

We were contracted to carry out the civils element at Middleway Level Crossing.

The scope included constructing a new Location Cabinet Suite, a new DNO cabinet base, 4 new RTL bases, a new Barrier Base, installing an Under Road Crossing (URX) and installing troughs and buried ducts for all of the new equipment to be connected to the power supply and signalling cables.

All of these works were carried out whilst trains were operating and under a road closure.
