

AMCO

Footbridge
installation

December 2017

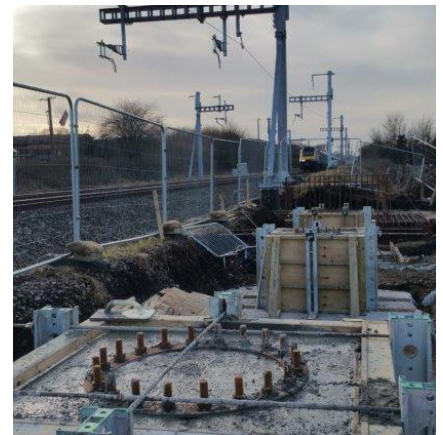

6 weeks

We were contracted by AMCO to complete the installation of a footbridge across a railway.

Our scope consisted of the installation of 6 pier foundation bases, the installation of 2 concrete access stairs and once this was completed we installed 658 metres of palisade fencing.

As well as completing all the mentioned works above we also completed the erection of the shuttering for all of the pier foundations and stairs.

We worked exceptionally well and completed all works within a 6 week timeframe, this was within budget and well on time.
