

AMCO

Hotspur Street
Drainage

February 2019

2x54hr road
closures

We were contracted by AMCO to complete drainage works at Hotspur Street, Liverpool.

Our works included:

- To tie into existing United Utilities dual surface water and foul drainage manhole at approx. 2.7 meters depth.
- Approx. 40 meters of 200mm Carrier pipe installed in the highway at an average depth of 2.5 meters. Resurfacing to the Highway.
- New concrete manhole with cover and frame installed on Network rail property.
- Approx. 15meters of 200mm pipe installed on network rail property.
- To tie into existing UTX chamber on Network rail property.
- Reinstatement to all excavated trenches.

A 200mm Pipe was discovered during the excavation, this was running at the same level of the pipe we were installing. This resulted in Universal Group installing a new backdrop rodding point including frame & cover and resurfacing work.
