

Dyer & Butler

Woking Sidings
Platforms

May 2019

6 weeks

We were contracted by Dyer & Butler to undertake the construction of nine new drivers platforms required in preparation for the release of the summer timetables.

Our works included:

- Blockwork piers supporting pre-stressed hollow core concrete planks.
- Hollowcore planks installed by RRV and topped with copers, concrete screed surfacing and GRP handrails.
- Concrete infilled brickwork stairs with GRP nosings and treads.

All works were completed after a fast mobilisation, to short timescales, on live station sidings with limited possession availability.
