Sign bases

April 2018

3 Days

We were contracted by BAM Nuttall Morgan Sindall JV to install sign bases on the M62 at Junction 12.

Our scope was to install 323mm diameter steel tube, bottom driven piles using our own D1000 drop hammer rig. The piles were 6 metres in depth and reinforced with 6B16 full depth cages.

We installed 4 piles per base which are all located adjacent to the hard shoulder on the M62, we did this during lane closures at night time.

When the installation of the piles had been completed we passed the job onto our Civils teams who carried out the associated concreting works to complete the bases.
