

J Murphy & Sons

Foundations for new bridge

May 2018

5 weeks

We were contracted by J Murphy and Sons to install the pile foundations for a new over bridge.

Our scope consisted of the installation of a total of 60nr 450mm piles.

We installed 30 piles for each abutment in a 4.3 meter headroom underneath the existing bridge deck. The piles were typically 20 meters long and all were installed using SFA (Sectional Flight Auger) techniques.

We used two of our own Klemm 709 4.2m short mast rigs.

This job was completed on time and within budget - this is a great example of the expertise we can offer, especially in a restricted access area.
