

Buckingham

Station refurb & platform install

February 2017

50 weeks

We were contracted by Buckingham's to supply ongoing labour in order to carry out varying works from safety critical staff, specialist labour, site supervision to site management.

The scope of the works included refurbishment of the existing station platforms, surfacing and installation of a footbridge to act as a secondary means of escape. We also delivered 1500m track formation & bulk excavation to incorporate the new P5 Loop Line.

During a three and a half week blockade we supplied upwards of 60 personnel to help BGCL deliver four station platforms, a new footbridge, new track alignment and approximately £1,100,000 of work on time and with zero accidents or incidents.
