

Willetts Lane Bridge

Case Study: 12.11.2019

Dyer & Butler

Bridge Repairs

September 2019

7 weeks

Universal Civils were contracted by Dyer & Butler to complete all of the repairs to the brickwork and structural cracks at Willetts Lane Bridge.

Willetts Lane Bridge is an old Victorian arched overbridge, the bridge was badly spalled and had numerous large cracks in the structure.

Universal Civils completed 45 square meters of spalled brickwork and all stitching work, including stitching to 1meter deep into the arch structure. Extra work was identified during the original planned work and this work was undertaken and completed with the original contracted timescale.

The client Dyer & Butler and their client Network rail were all more than happy with the extremely good standard of work completed by the Universal Civils site team.
