

Buckingham Group

Piling platform

February 2018

4 weeks

**We were contracted by Buckingham Group to complete the piling platforms ready for the new footbridge installation.**

Our scope consisted of the construction of the piling platforms to the up and down cess, this was to be constructed in accordance with the approved temporary works design as provided by the client.

On completion of the piling platform construction, our Universal Piling team took over the ownership of the site to install the footbridge piles.

This is a great example of how our company can provide our clients with the whole groundworks packages. Our highly skilled teams are able to work exceptionally well together in completing such works.
